Key

Column 1: Common Name

The list is arranged alphabetically by common names. Those listed are generally those provided in authoritative publications, including the Flora of Victoria (Walsh & Entwisle 1994, 1996, 1999), A Handbook to Plants in Victoria (Willis 1970, 1973) and other national, state and regional floras.

Column 2: Botanical Name

The taxonomy and botanical nomenclature used in the list is based on A Census of the Vascular Plants of Victoria (Ross & Walsh 2003) and subsequent advice from the National Herbarium of Victoria. It is current as of October 2003.

Column 3 National Conservation Status = EPBC listing

National conservation status is based on the **Environment Protection and Biodiversity Conservation Act 1999** (EPBC Act) list of taxa considered threatened in Australia. In some instances the botanical and/or the common names of plants may have changed since the taxon was first listed under the EPBC Act. In such instances the EPBC Act status has been applied to the circumscription intended at the time of listing under the Act. This information is accurate as at December 2004. For further information regarding the EPBC Act and, in particular, for the most up-to-date listings under the Act, refer to the following web site: <http://www.environment.gov.au/epbc/>

The categories for currently listed Victorian taxa are as follows:

EX Extinct: A taxon is extinct when there is no reasonable doubt that the last individual of the taxon has died.

CR Critically Endangered: A taxon is critically endangered when it is facing an extremely high risk of extinction in the wild in the immediate future.

EN Endangered: A taxon is endangered when it is not critically endangered but is facing a very high risk of extinction in the wild in the near future.

VU Vulnerable: A taxon is vulnerable when it is not critically endangered or endangered but is facing a high risk of extinction in the wild in the medium-term future.

Column 4: Victorian Advisory Listing

x Presumed Extinct in Victoria: not recorded from Victoria during the past 50 years despite field searches specifically for the plant, or, alternatively, intensive field searches (since 1950) at all previously known sites have failed to record the plant.

e Endangered in Victoria: at risk of disappearing from the wild state if present land use and other causal factors continue to operate.

v Vulnerable in Victoria: not presently endangered but likely to become so soon due to continued depletion; occurring mainly on sites likely to experience changes in land-use which would threaten the survival of the plant in the wild; or, taxa whose total population is so small that the likelihood of recovery from disturbance, including localised natural events such as drought, fire or landslip, is doubtful.

r Rare in Victoria: rare but not considered otherwise threatened - there are relatively few known populations or the taxon is restricted to a relatively small area.

k Poorly Known in Victoria: poorly known and suspected, but not definitely known, to belong to one of the above

categories (x, e, v or r) within Victoria. At present, accurate distribution information is inadequate.

Column 5: Status under the Flora and Fauna Guarantee Act 1988

This column provides information on the listing status under the provisions of Part 3 of the **Flora and Fauna Guarantee Act 1988**. A taxon may be listed as threatened if it has been nominated, assessed by the Scientific Advisory Committee and approved by the Minister for Environment. Any person may make a nomination for listing. This information is accurate as at December 2004. For the most up-to-date listings under the Act, refer to the following web site: <http://www.dse.vic.gov.au>.

N Nominated for listing as threatened

X- Rejected for listing as threatened; taxon invalid or ineligible

D Delisted as threatened under the FFG Act
